

# Seven Arrows Elementary Mathematics & STEAM

**MATHEMATICS:** We feature Singapore Math in Kindergarten through Fifth Grade, and Illustrative Math in Sixth Grade. In addition to being fully trained in these highly successful programs, our teachers bring a well-rounded and engaging math education using manipulatives, real-world contexts, and IXL and ALEKS programs.

**STEAM:** Our STEAM program provides hands-on learning experiences in physical, life, earth, and space sciences, robotics, Makerspace, and innovation. With a focus on design thinking, students first deeply connect with human, animal, and environmental needs and then develop innovative, unique solutions. They prototype, test, and refine their ideas in an experiential, collaborative Makerspace, utilizing diverse tools and approaches, and critically reflect on both meaningful process and authentic product.

**TECHNOLOGY:** Thoughtfully implemented technology enhances various skills, with digital citizenship emphasized at every grade level. Parent resources and coaching in digital safety is provided through material resources and workshops. AI is introduced in 5th grade through SchoolAI, a program that is completely driven and supervised by the 5th grade teacher. Sixth graders learn media literacy.

- Grades K-3: 1:1 iPads
- Grades 4-6: 1:1 Laptops

“Seven Arrows is one of only two schools that we researched in Los Angeles with the capability to differentiate math instruction to accommodate advanced learners.”
